confidential VM (SEV-SNP / TDX)
upload (encrypted)
ingest and parse
client SDK
1. verify composite evidence against the policy
2. upload, encrypted to the node key
3. open the sealed answer
embedding (llama.cpp, CUDA)
CUDA
H200 in CC mode
passed through to this VM; SPDM-protected PCIe, bounce buffers; attestation transcript via NVML
vector index (Qdrant on tmpfs)
sealed answer
retrieve and filter
generate (llama.cpp, CUDA)
CUDA
verify
prove (SNP report + GPU transcript), get key
KBS + policy engine (customer's trust domain)
releases the index key only if the SNP report and the GPU transcript are bound to this session and the measurements, TCB and guest policy pass
AMD KDS, NVIDIA RIM + OCSP
VCEK, reference manifests, revocation (cached)
